

INDEX RERUM.

velocitas computo colligitur 372, 17; paululum major esse debet æstivo quam hyberno tempore per theoriam 373, 26.
cessatio fit statim, ubi cessat motus corporis sonori 374, 6.
augmentatio per tubos stenterophonicos 374, 9.
Spatium absolutum & relativum p. 6, 7, 8.
non est æqualiter plenum 402, 27.
Sphæroidis attractio, cujus particularum vires sunt reciproce ut quadrata distantiarum 217, 4.
Spiralis, quæ fecit radios suos omnes in angulo dato, qua lege vis centripetæ tendentis ad centrum spiralis describi potest a corpore revolvente, ostenditur I, 9: II, 15, 16.
Spiritus quendam corpora pervadentem & in corporibus latentem, ad plurima naturæ phænomena solvenda, requiri suggeritur 530, 23.
Stellarum fixarum quies demonstratur 410, 27.
radiatio & scintillatio quibus causis referendæ sint 510, 8.
Stellæ novæ unde oriri possint 525, 28.
Substantiæ rerum omnium occultæ sunt 530, 21.

T.

Tempus absolutum & relativum p. 6, 7.
Temporis æquatio astronomica per horologium oscillatorium & eclipses satellitum Jovis comprobatur 8, 8.
Tempora periodica corporum revolvantium in ellipticis, ubi vires centripetæ ad umbilicum tendunt I, 15.
Terræ dimensio per Norwoodum 412, ult. per Picartum 413, 5; per Cassinum 413, 7.
figura invenitur, & proportio diametrorum, & mensura graduum in meridiano III, 19, 20.
altitudinis ad æquatorem supra altitudinem ad polos quantus sit excessus 415, 20: 421, antepenult. &c.
semidiameter maxima, & minima 415, 25; mediocris 415, 20. &c.
globus densior est quam si totus ex aqua constaret 406, 20.
axis nutatio III, 21.
motus annuus in orbe magno demonstratur III, 12, 13: 52, 28.
eccentricitas quanta sit 460, 10.
aphelii motus quantus sit 411, 10.

V.

Vacuum datur, vel spatia omnia (si dicantur esse plena) non sunt equaliter plena 356, 19: 402, penult.
Velocitas maxima quam globus in medio resistente cadendo potest acquirere II, 38. cor 2.

Velocitates corporum in sectionibus conicis motorum, ubi vires centripetæ ad umbilicum tendunt I, 16.
Veneris tempus periodicum 393, 18.
distantia a sole 393, 21.
aphelii motus 411, 11.
Virium compositio & resolutio p. 15.
Vires attractivæ corporum sphaericorum ex particulis quacunque lege trahentibus compositorum expendantur I, sect. 12.
non sphaericorum ex particulis quacunque lege trahentibus compositorum expendantur I, sect. 13.
Vis centrifuga corporum in æquatore terræ quantitas fit 413, ult.
Vis centripeta definitur p. 3.
quantitas ejus absoluta definitur p. 4.
quantitas acceleratrix definitur p. 4.
quantitas motrix definitur p. 5.
proportio ejus ad vim quamlibet notam, qua ratione colligenda sit, ostenditur 45, 10.
Virium centripetarum inventio, ubi corpus in spatio non resistente, circa centrum immobile, in orbe quocunque revolvitur I, 6: I, sect. 2 & 3.
Viribus centripetis datis ad quodcunque punctum tendentibus, quibus figura quævis a corpore revolvente describi potest; dantur vires centripetæ ad aliud quodvis punctum tendentes, quibus eadem figura eodem tempore periodico describi potest 50, 3.
Viribus centripetis datis quibus figura quævis describitur a corpore revolvente; dantur vires quibus figura nova describi potest, si ordinatæ augeantur vel minuantur in ratione quacunque data, vel angulus ordinationis utcunque mutetur, manente tempore periodico 54, 10.
Viribus centripetis in duplicata ratione distantiarum, decrefcentibus, quænam figuræ describi possunt, ostenditur 59, 23: 163, 10.
Vi centripeta, quæ sit reciproce ut cubus ordinatim applicatæ tendentis ad centrum virium maxime longinquum, corpus movebitur in data quavis confectione 51, 6.
quæ sit ut cubus ordinatim applicatæ tendentis ad centrum virium maxime longinquum, corpus movebitur in hyperbola 221, antepenult.
Umbra terrestris in eclipsibus lunæ augenda est, propter atmospheræ refractionem 463, 5 a fine.
Undarum in aquæ stagnantis superficie propagatarum velocitas invenitur II, 46.
Vorticum natura & constitutio ad examen revocatur II, sect. 9: 481, 21: 526, 32.
U. Hujus voculæ significatio mathematica definitur 34, 19.

F I N I S.

CATALOGUS Librorum prostantium apud GUIL. & JOH. INNYS.

- OPTICKS, or a Treatise of the Reflections, Refractions, Infections and Colours of Light. The third Edition corrected. By Sir Isaac Newton, Kt. 8vo. 1721.
- Optice, five de Reflectionibus, Refractionibus, Infectionibus & Coloribus Lucis. Libri tres. Authore Iaac Newton, Equite Aurato. Latine reddidit Samuel Clarke, S.T.P. Editio secunda, auctior. 8vo. 1719.
- Analysis per Quantitatum Series, Fluxiones, ac Differentias cum Enumeratione Linearum tertii Ordinis. 4º. 1711.
- Arithmetica Universalis, five de Compositione & Resolutione Arithmetica Liber. Edit. secunda. 8vo. 1722.
- The same in English by Mr. Raphson. 8vo.
- The Philosophical Works of the Honourable Robert Boyle, Esq; abridg'd, methodiz'd, and dispos'd under the general Heads of Physics, Statics, Pneumatics, Natural History, Chymistry and Medicine. The whole illustrated with Notes, containing the Improvements made in the several Parts of natural and experimental Knowledge since his Time. In three Volumes. By Peter Shaw, M.D. 4º.
- Geometria Organica, five Descriptio Linearum curvarum universalis. Authore Colino Mac-Laurin Matheleos in Collegio novo Abredonensi Professore, & Reg. Soc. Socio. 4º. 1720.
- Philosophical Transactions, giving some Account of the present Undertakings, Studies and Labours of the Ingenious in many considerable Parts of the World, from 1665 to 1725. In 32 Volumes. Continued and published by Dr. James Jurin, Secretary to the Royal Society. N. B. There are 389 Numbers, most of which may be had separate.
- The same abridg'd by Mr. Lowthorp, and Mr. Mot. In 5 Vol. 4º.
- Epistola ad amicum de Cotesii Inventis Curvarum ratione, quæ cum Circulo & Hyperbola comparationem admittant, cui additur appendix. 4º. 1722.
- An Analytick Treatise of Conic Sections, and their Use, for resolving of Equations in determinate and indeterminate Problems, being the Posthumous Work of the Marquis de l'Hospital, Honorary Fellow of the Academy Royal of Sciences. 4º.
- Historia Cœlestis Britannica, tribus Voluminibus contenta, observante Johanne Flamsteedio, A. R. in Observatorio Regio Grenovicensi, 1725.
- Mathematical Elements of Natural Philosophy, confirm'd by Experiments, or an Introduction to Sir Isaac Newton's Philosophy. Written in Latin by William James s Gravesand, Doctor of Laws and Philosophy, Professor of Mathematicks and Astronomy at Leyden, and F.R.S. of London. Translated into English by J. T. Desaguliers, L.L.D. F.R.S. and Chaplain to his Grace the Duke of Chandos. In 2 Vol. 8º. 1726.
- An Essay on Perspective, written by William James s Gravesand, Doctor of Laws, &c. 8vo. 1714.
- Physico-Theology, or a Demonstration of the Being and Attributes of God, from his Works of the Creation, with large Notes and many curious Observations. By William Derham, Rector of Upminster in Essex, Canon of Windsor, F.R.S. The Sixth Edition. 8vo. 1723.
- Astro-Theology, or a Demonstration of the Being and Attributes of God, from a Survey of the Heavens. Illustrated with Copper Plates. The Fifth Edition. By the same Author. 8vo. 1726.
- Methodus Incrementorum directa & inversa. Authore Brook Taylor, L. L. D. & Regiæ Societatis Secretario. 4º. 1717.

18. The
